Plain Text

Hi Glean admin,

We're excited to make **Glean meeting notes** generally available today for customers on the Glean customer key. This feature is accessible via our Mac desktop app with Windows support coming on June 8th.

Glean meeting notes enables your team to generate near real-time transcriptions from meetings, create summaries and action items from transcripts, and interact and search any meeting artifacts with full company context. This feature does not store raw meeting recordings and it does not use any meeting bots. It works across meeting platforms and respects your permissions.

To give admins time to review and configure the feature before it is turned on for your instance, we're opening a configuration window now through **June 8**.

Here's what to know:

- Open [meeting notes settings](#) in the admin console. Path: Admin console > Assistant > Settings > Meeting notes
- Choose one of three settings for your company
 - Default: if left here, the meeting notes feature will be enabled on June 8th.
 - On: enable meeting notes for your company now
 - Off: keep the meeting notes feature disabled. If you switch to Off before June 8th, your users will not be auto-enabled at GA

A few important notes:

- Control for this feature is currently **company-wide** only. Group-level controls are not
